

Ahmed Mostafa Megahed

Flutter Developer | BLoC & Clean Architecture | Cross-Platform (iOS & Android)

Giza, Egypt (Open to Remote/Hybrid) | +20 01553015505 | am2040724@gmail.com

GitHub: github.com/ahmedmostafa361 | LinkedIn: [linkedin.com/in/ahmed-mostafa-041690375](https://www.linkedin.com/in/ahmed-mostafa-041690375) | TikTok: [@fixha_tech](https://www.tiktok.com/@fixha_tech)

PROFESSIONAL SUMMARY

Flutter developer building production, consumer-facing mobile apps with BLoC/Cubit and Clean Architecture (Repository, Use Cases, Dependency Injection). Shipped and continue to maintain "Siratic," a live Google Play app, iterating on real user feedback across multiple releases. Built a full-featured E-Commerce app on MVVM + Clean Architecture with Dio/Retrofit REST integration, authentication, and persistent state. Collaborated in a 4-person developer team using Git feature branches, pull requests, and merge conflict resolution. Comfortable using AI development tools while owning and understanding every line shipped. Recognized as Best Intern of the Month at Uneeq Interns; teaches Flutter to a 1,000+ follower community on YouTube and TikTok.

TECHNICAL SKILLS

Architecture & State: BLoC/Cubit, Clean Architecture, MVVM, Provider, Dependency Injection (GetIt, Injectable), Design Patterns

Languages & Platforms: Flutter, Dart (Null Safety), JavaScript, Android SDK, iOS (Simulator/Device Testing)

Networking & Backend: REST APIs, Dio, Retrofit, token-based (Bearer/JWT) authentication, error mapping/handling, Firebase Auth, Cloud Firestore, local data persistence (Hive, SharedPreferences), Node.js (in progress)

Version Control: Git, GitHub, feature-branch workflows, pull requests, merge conflict resolution in team projects

Collaboration & Design: Figma & Stitch (UI/UX Handoff), translating documented requirements into features, Agile development, post-launch maintenance

AI & Tooling: Groq API (LLaMA 3.3 70B), AI-assisted development with output ownership, Postman, Android Studio

EXPERIENCE

Mobile App Development Intern — Uneeq Interns

May 2026 | Best Intern of the Month, App Development Track

- Designed and shipped two production Flutter apps (QuizMaster, AI To-Do App) from concept to delivery, testing across Android and iOS simulators/devices; translated a documented requirements spec and Stitch-based UI designs from my supervisor into production features.
- Integrated Firebase, REST APIs, and the Groq AI API (LLaMA 3.3 70B) to power real-time data sync and AI-generated task summaries, including request/response error handling for unreliable network conditions.
- Conducted manual QA across multiple Android OS versions/devices and delivered consistent, high-quality releases using Agile workflows and Git-based version control, earning Best Intern of the Month recognition among the cohort.

SELECTED PROJECTS

E-Commerce App — Full-Stack Shopping Application

GitHub: github.com/ahmedmostafa361/E-Commerce_app

- Built a production-ready shopping application for iOS and Android using MVVM + Clean Architecture, BLoC/Cubit, Dio, Retrofit, GetIt, and Injectable.
- Implemented token-based (Bearer/JWT) authentication, products, categories, brands, wishlist, shopping cart, and persistent login against a real REST API, including centralized error mapping for failed/timed-out requests.
- Architected a scalable MVVM + Clean Architecture codebase with Repository, Use Cases, and Dependency Injection, enabling modular, maintainable, and easily extensible features; implemented UI directly from Figma designs.

Siratic — Islamic Utility & Prayer Times App (iOS & Android) — Live on Google Play

Google Play: play.google.com/store/apps/details?id=com.siratic.quran | GitHub: github.com/ahmedmostafa361/islami-app

- Published and actively maintain a live production app on Google Play with prayer times, Athan notifications, Quran, Hijri calendar, and offline features backed by local data persistence (SharedPreferences), iterating across multiple releases based on real user feedback.
- Diagnosed and resolved Android Do Not Disturb notification issues across Android 13 devices through manual QA; optimized background services and state management using Provider and Selector.

Evently — Event Management Platform

GitHub: github.com/ahmedmostafa361/Evently_app

- Built a production-ready cross-platform event management application for iOS and Android using Flutter, Provider, Clean Architecture, Firebase Authentication, and Cloud Firestore with real-time synchronization.
- Engineered a secure OTP-based password recovery system using EmailJS, Firebase Auth, Firestore, Brevo SMTP, and Pininput, solving real-world email delivery and authentication edge cases.
- Implemented Google Sign-In, interactive maps, geolocation, Google Maps navigation, localization (Arabic/English with RTL support), persistent dark/light theming, onboarding, and reusable UI components from Figma designs.

Movies App — Team Project (4 Developers)

GitHub: github.com/ahmedsukkar52-cmd/movies_app/tree/developer/lib

- Built a movies discovery app (REST API, Dio) collaborating with a 4-person developer team using Git feature branches and pull requests.
- Resolved merge conflicts across shared modules through regular code reviews and coordinated branch integration.

Additional Projects: AI To-Do App (Groq API, Speech-to-Text) — github.com/ahmedmostafa361/to_do_app_flutter · News App (BLoC, Hive) — github.com/ahmedmostafa361/news_app · QuizMaster (Firebase, Firestore) — github.com/ahmedmostafa361/quiz_app_flutter

EDUCATION

B.Eng. Computer & Software Engineering — Expected 2028

Misr University for Science and Technology | GPA: 3.45 / 4.0

CERTIFICATIONS & LANGUAGES

Flutter Development Diploma — Route IT | SprintUp Mobile (Flutter) — Sprints & Microsoft | Front-End Web Dev — WE | Node.js/Backend Development — In Progress

Languages: Arabic (Native) | English (Professional Working Proficiency)
